PROJECT TITLE

Employee Performance Analysis using Excel

AGENDA

- 1. Problem Statement
- 2. Project Overview
- 3. End Users
- 4. Our Solution and Proposition
- 5. Dataset Description
- 6. Modelling Approach
- 7. Results and Discussion
- 8. Conclusion

PROBLEM Statement

Employees performance analysis Using excel involves Evaluating and measuring an Employees work effectiveness and efficiency based on key performance indicator (kpi). This data is then analysed using excels functions and tools such as pivot tables, chats, and conditional formatting, to identify patterns, strengths' and areas for improvement.

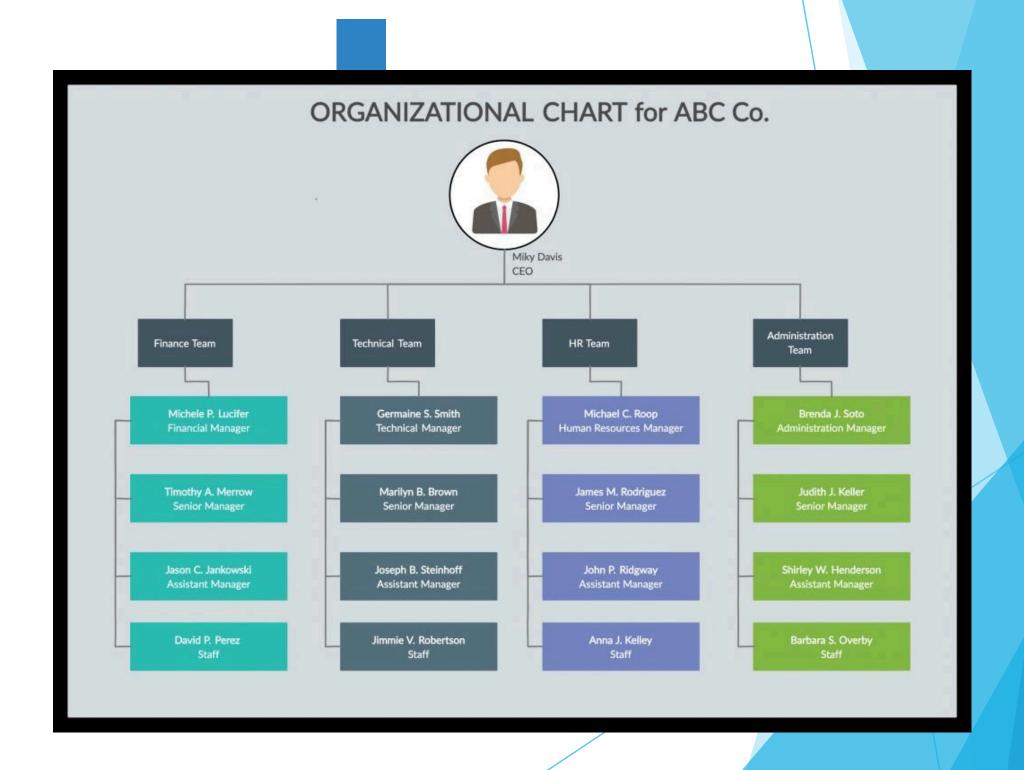

PROJECT OVERVIEW

The project "employee performance analysis Using excel "aims to systemically evaluate employee productivity and effectiveness by leVerage analytics tools .the project will involve collecting and organizing performance data such as task completion rates ,accuracy and records. The final delivery will include a detailed report and virtual.

WHO ARE THE END USERS?

- Organization
- Employee manager
- •HRM

OUR SOLUTION AND ITS VALUE PROPOSITION

Data insight Enables managers to make informed decisions Based on Accurate real time performance data.

Impovere efficient the Data collection and analysis the process.

Better performance analysis helps in recognition of Performance in Addressing the Under Performance analysis the unlimited data.

Dataset Description

Descriptions for each of the columns in the dataset:

- 1. Employee ID: Unique identifier for each employee in the organization.
- 2.First Name: The first name of the employee.
- 3.Last Name: The last name of the employee.
- 4.Email: The email address associated with the employee's communication within the organization.
- 5.Business Unit: The specific business unit or department to which the employee belongs.
- 6.State: The state or region where the employee is located.
- 7.Job Function: A brief description of the employee's primary job function or role.
- 8.Gender: A code representing the gender of the employee (e.g., M for Male, F for Female, N for Non-binary).
- 9.Performance Score: A score indicating the employee's performance level (e.g., Excellent, Satisfactory, Needs Improvement).
- 10.Current Employee Rating: The current rating or evaluation of the employee's overall performance.

THE "WOW" IN OUR SOLUTION

- Predictive Analytics: Integrating predictive models to forecast future performance trends based on historical data, giving managers a proactive approach to workforce planning.
- Automated Alerts: The tool can be set up to send automated alerts for critical performance issues, ensuring that managers are immediately notified when attention is needed.

MODELLING

o visualize the data in an easily interpretable format, making trends and ore apparent.

tation: Various types of charts (e.g., bar charts, line charts, pie charts) will based on the pivot table outputs. For instance, a line chart could show the employee's productivity over time, while a bar chart could compare e across different departments.

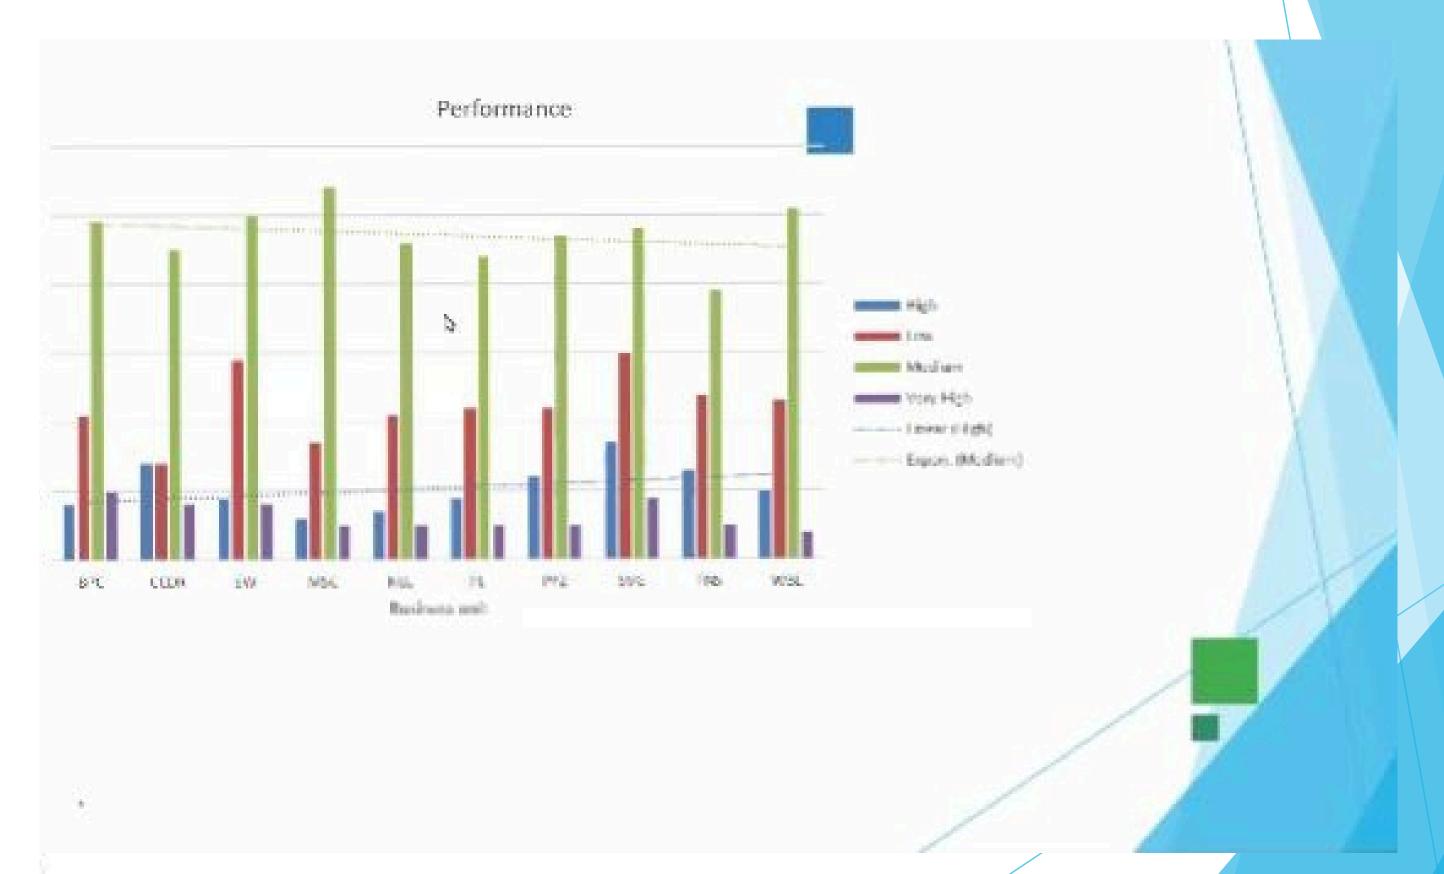

nal Formatting

o highlight specific data points that meet certain conditions, making it ot trends, outliers, or areas of concern.

tation: Conditional formatting will be applied to cells based on rules, such ing cells in red if an employee's performance falls below a certain or in green if targets are exceeded. This immediate visual cue helps in tifying critical areas needing attention.

RESULT

S

conclusion

ormance Analysis Using Excel® project provides a robust and userr evaluating and managing employee performance. By leveraging
ools—such as filtering, pivot tables, charts, and conditional
ject transforms raw performance data into actionable insights. The
dashboards and customizable reports empower managers to make
ns, optimize workforce productivity, and foster continuous
the organization. This solution not only streamlines performance
so offers a cost-effective, scalable approach to enhancing overall
ncy.
